Frequently Asked Questions (FAQ)

Q1: Where can I find the official 2007 AP Chemistry free-response questions and scoring guidelines?

A1: The best place to access official past AP Chemistry exams, including the 2007 exam, is the College Board website. They often release a selection of past exams, including the questions and the scoring guidelines that show the correct solutions and how points are awarded for different parts of the answer. These resources are invaluable for preparation.

Q2: Are there any practice resources besides the official College Board materials?

A2: Yes, many prep books and online resources offer practice AP Chemistry exams and free-response questions. These can be supplementary to the official College Board materials and offer different perspectives and question styles. However, always prioritize the official materials for accuracy.

Q3: How much weight does the free-response section carry in the overall AP Chemistry score?

A3: The AP Chemistry exam is typically divided between multiple-choice and free-response sections. The weighting of each section can vary slightly from year to year, but the free-response section constitutes a significant portion of the overall score. Check the College Board website for the exact breakdown for a particular year.

Q4: What if I make a small calculation error in a free-response question? Will I lose all the points?

A4: No, usually not. Graders generally award partial credit for demonstrating understanding of the concepts even if there's a minor calculation mistake. Showing your work clearly helps you obtain partial credit.

Q5: What types of equations should I memorize for the AP Chemistry exam?

A5: You'll need to memorize various equations, including those related to equilibrium constants (K_c , K_p), acid-base equilibria (pH, pOH, K_a , K_b), thermodynamics (ΔG , ΔH , ΔS), and electrochemistry (Nernst equation). Focus on understanding the concepts behind the equations rather than just memorizing them without comprehension.

Q6: How important is the use of correct units and significant figures in the free-response section?

A6: It's very important. Points are often deducted for incorrect units or significant figures. Pay close attention to these details throughout your calculations and final answers.

Q7: What's the best way to prepare for the descriptive chemistry questions on the free-response section?

A7: For descriptive chemistry, focus on understanding the periodic trends (electronegativity, ionization energy, atomic radius), common reactions of different groups of elements, and the properties of various compounds. Practice identifying and explaining these characteristics is crucial.

Q8: How can I improve my time management during the AP Chemistry free-response section?

A8: Practice under timed conditions. Familiarize yourself with the allotted time per question and allocate your time accordingly. Start with the questions you find easier to build confidence and then move on to the more challenging ones. Don't spend too much time on a single question; move on if you get stuck and revisit it later if time permits.
